

Table 1

Portrait Mode							
Device Type	Screen Type	iOS Platform	Android Platform	Comment			
Handheld(Small)	Dashboard			1. User is able to close and open the slider left navigation bar by clicking on hamburger icon. <b>Difference :</b> On iOS you can able to close and open the slider left menu by swiping hamburger icon left and right position as well.			
				Here for each page when we open the left slider menu then our detail page is not gets shrink and UI remains same. So that is also we need to consider. And we can access this Hamburger icon from any screen. Also left navigation slider is open close on click on both Hamburger icon as well as Zerochaos Logo on Top Slider. Also left navigation sections will remains open if it is already open when you clicks on the another section. If you clicks on the same section then it will behaviour toggle. If you are at detail page and if user clicks on any left menu option from left slider then it will close all previously opened screens and only open the clicked option related screen.			
	View Time Sheet			It Will only support Portrait mode on Small devices for both Android and iOS. As you can see that page design will remains same even we have changes the device orientation from portrait to landscape. And at a time only one withdrew will remains open. Also if left slider is already opened and use will clicks on any of the option then it will close the slider and open that page.			
	Detail Page			<b>Note :</b> We done have back button for the Android platform near to hamburger icon but it will present for iOS when we move from list page to another page so we have pages in stack >1 so at that time it will show back button for iOS for Android we will use its default device back button. And when you will come from detail to list page then it will automatically hide the back button.
